Art Unit: 1754

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no "description support" in the original specification for such terms as "laser intensities between  $10^{11}$  W/cm<sup>2</sup> and  $10^{12}$  W/cm<sup>2</sup>", "pulse energy  $10^5$  J per pulse", "not higher than  $150^{\circ}$  C" and "pulse length between 0.1 nanoseconds and 1 nanosecond". Applicant is invited to point out where in the specification "description support" exists for such terms.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, there is no clear antecedent basis for "said near infrared wavelengths between 0.75 micron and 1 micron", since the wavelengths could be in the blue-purple range. Also in claim 1, there is no clear antecedent basis for "said blue-purple wavelengths between 0.35 micron and 0.4 micron", since the wavelengths could be in the infrared range. It is suggested that claim 1 be rewritten as two separate independent claims to avoid these rejections. In claim 2,

Art Unit: 1754

"large quantity" is indefinite. In claim 6, it is indefinite as to whether the actual photon intensity would be in the "desired" photon intensity range. In claim 11, it is indefinite as to whether the hydrazine could be cooled to temperatures as high as 150<sup>o</sup> C, since such a temperature would not constitute an "ordinary temperature".

Claim 8 is objected to under 37 CFR 1.75(b) in failing to further limit claim 2.

This application apparently discloses allowable subject matter.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
